

Software Engineer

Position Type

Desired Class Level(s)

Full Time

Graduate Student, Alumnus

Desired Skills

C# SQL JavaScript C++ Java HTML/CSS

Description

send resumes to: jkruper@kioware.com

Our KioWare kiosk software is used around the world by large and small organizations to convert Windows and Android computers into kiosks and purposed devices. KioWare locks down the computer and ensures only the configuration content is available to the kiosk user. KioWare software interfaces with a broad range of OEM hardware components such as credit card mag-stripe/EMV readers, cash acceptors, cash dispensers, barcode and RFID scanners, cameras, and proximity sensors. We also have a kiosk management solution called KioWare Server/KioCloud. This is a browser based application that enables remote management and control of deployed kiosks and purposed devices. We also have a video conferencing solution for KioWare that is called KioCall. It has its own desktop application as well as a browser based admin application. Besides our KioWare website which contains both public and private interfaces, we have several other company websites that need to be maintained.

We compete in a very innovative industry, so it is critical we continue to expand our product offerings. Jobs include design, development, quality assurance, technical support and training.
